

# Creating synergy between the emergency services.

**In a world where emergency services face new challenges daily, the need for seamless and secure multi-agency co-operation is greater than ever. But the traditional tools for inter-agency communication that most emergency services rely on have limitations, which make effective co-ordination difficult.**

- Extranets take time and resources to set up. Access has to be managed and monitored and users helped with log-on details
- Email communications may not be fully secure
- Telephones are not ideal for conveying precise details and plans

## Secure Collaboration from HP and Microsoft

The industry-leading Frontline Partnership from Microsoft and HP offers a unique, cost-effective and compelling solution – Secure Collaboration:

- Brings together disparate organisations, processes, people and information into a single cohesive group, ensuring maximum efficiency when responding to crises
- Provides management with the ability to co-ordinate and control how much or how little information is shared
- Achieved through the deployment of ubiquitous, cost-effective technologies that your staff already know how to use

Cost-effective Secure Multi-Agency Collaboration from HP and Microsoft – The Frontline Partnership.

- Defence
- Intelligence
- Police
- Justice
- Central Government
- Local Government
- Fire
- Ambulance
- Social Care
- Children's Services

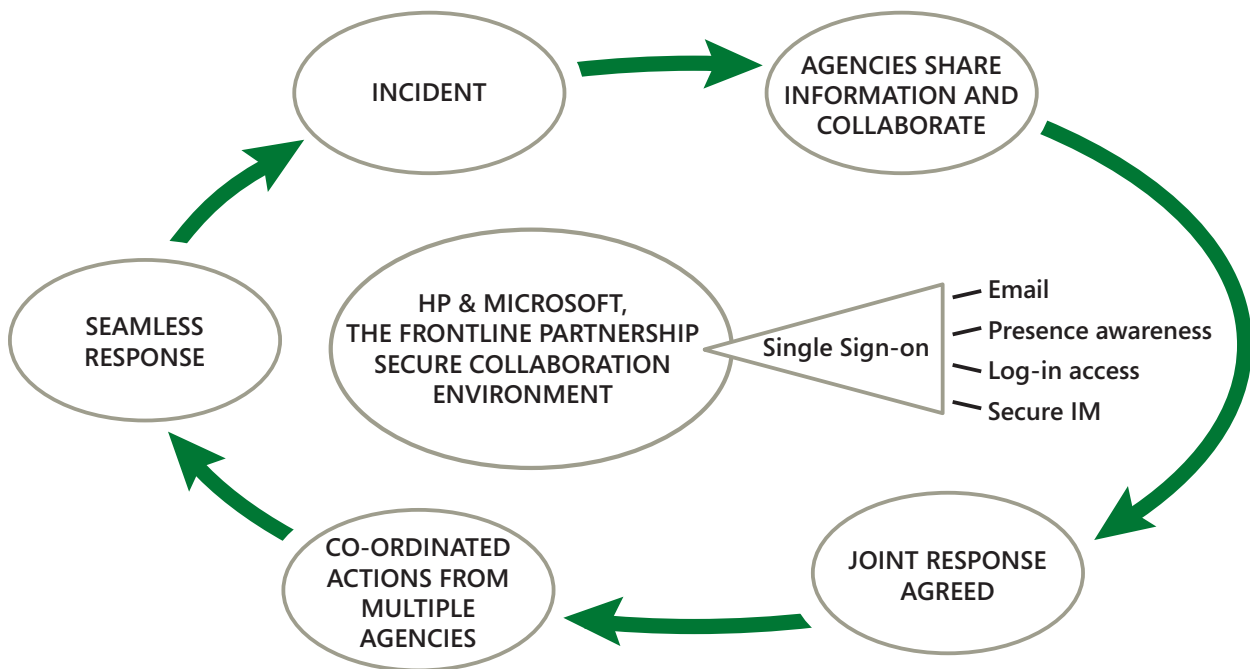

# Secure Collaboration from HP and Microsoft

Secure Collaboration delivers:

- Seamless and secure interoperability between different agencies and key users
- Real-time collaboration and exchange of critical information, and application sharing
- Complete, centralised control over shared information and users with differing levels of access and privileges
- Flexibility based on open standards to leverage legacy systems and resources
- Intrusion detection and security monitoring
- Reduced costs

Secure Collaboration uses standard hardware and software products from Microsoft and HP that are built into a fully-integrated solution:

- Microsoft ADFS (Active Directory® Federation Services)
- Microsoft Live Communications Server
- Microsoft Windows Server® 2003
- Microsoft Windows® SharePoint® Services
- HP ProtectTools
- Symantec security solutions

**See what Secure Multi-Agency Collaboration from The Frontline Partnership can do for your organisation.**

We've got a fully functioning demonstration environment based on a public sector emergency response scenario. To arrange a demonstration:
